PROplan

PLAN YOUR DREAM STORY IN ONE PLACE

A mobile application that transforms scattered planning into an organized connected film making workflow for Pre-Production.

PRE-PRODUCTION | 1 - PLACE | MOBILE

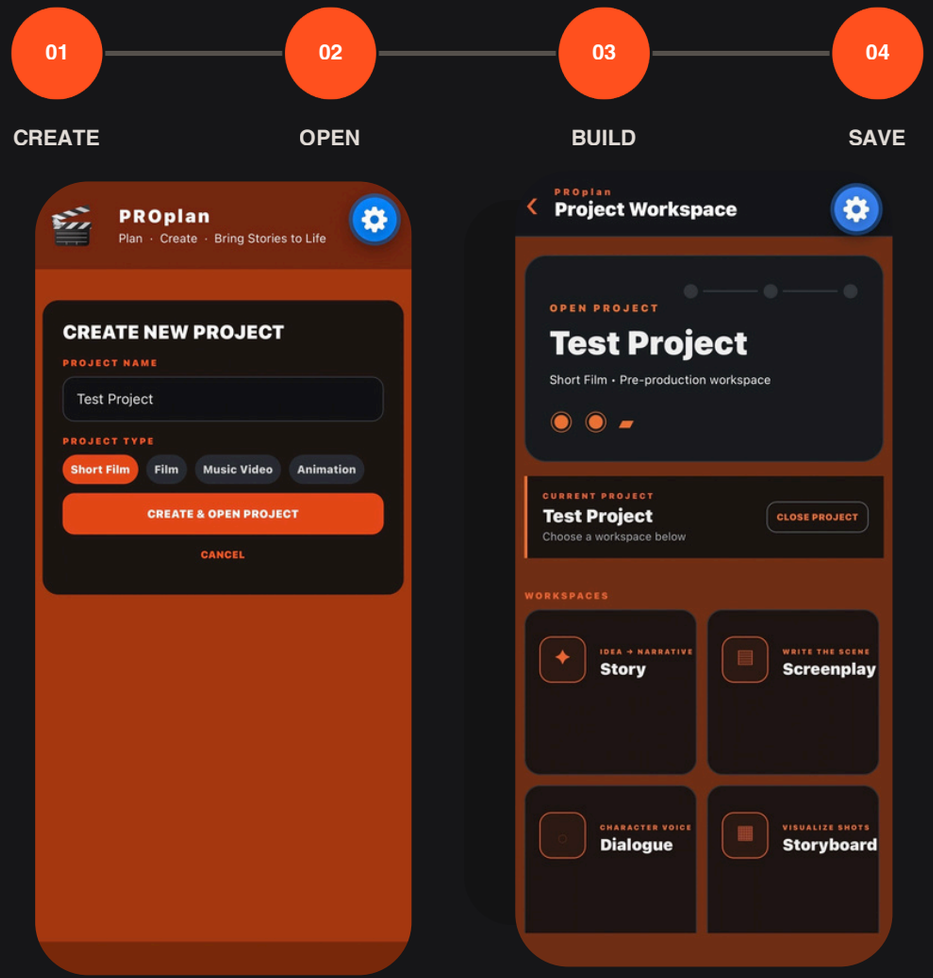

THE IDEA

From scattered
to one creative system.

I started with a simple problem : How can unorganized film planning be made easier? The solution I created was PROplan, a system that brings every part of film pre-production planning into one place to help the creator stay organized.

DESIGN GOAL

Make Pre-Production planning easier, organized and more efficient.

DESIGN

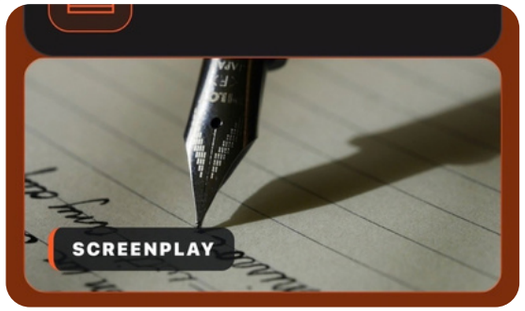

Seven focused spaces.

One connected filmmaking workflow.

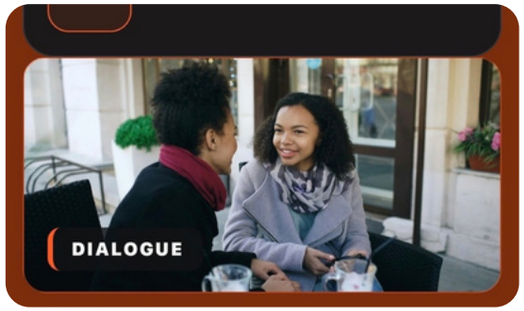

Each workspace is built around a specific step of pre-production, while keeping the project as the focal point. This keeps navigation predictable and focused while letting each task feel specialized.

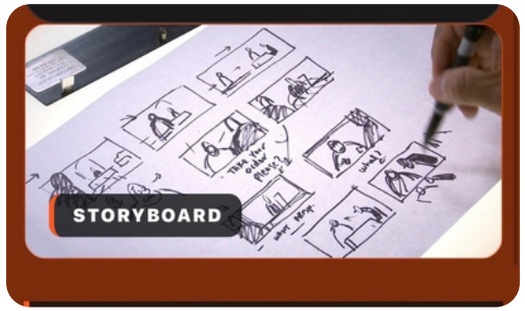

STORY
Idea to narrative

SCREENPLAY
Write the scene

DIALOGUE
Character voice

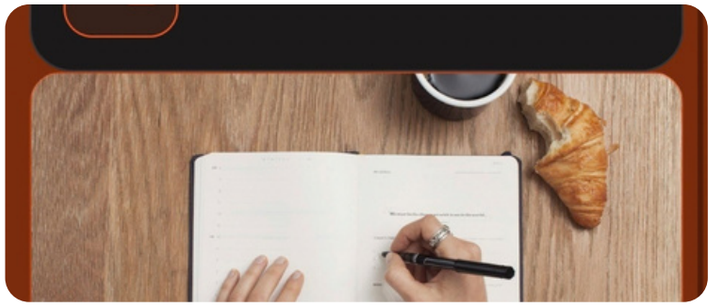

STORYBOARD
Visualize shots

LOCATIONS
Build the world

CAST
Characters

NOTES
Capture ideas

PROCESS

From filmmaking need

to working mobile prototype.

I developed PROplan by first mapping the pre-production tasks I use when planning a film, then translating those tasks into a mobile information architecture. I designed a consistent visual system, built each workspace, connected project data, and repeatedly tested the experience on web and mobile.

01

DEFINE
Identified the core pre-production needs: story, screenplay, dialogue, storyboard, locations, cast, and notes.

02

STRUCTURE
Organized those needs into seven workspaces connected to one active project.

03

DESIGN
Created the dark cinematic interface, orange accent system, reusable cards, editors, buttons, and navigation patterns.

04

BUILD
Implemented the interface and interactions with JavaScript and React Native; used Expo for development and mobile testing.

05

STORE
Used AsyncStorage for local persistence and JSON-style structured project data so work remains available on the device.

06

TEST + ITERATE
Tested navigation, text entry, save/cancel behavior, mobile keyboard handling, alignment, and screen responsiveness; revised issues as they appeared.

About

Storytelling meets technology.

DESCRIPTION

PROplan is a mobile pre-production workspace for student filmmakers. It brings story development, screenplay writing, dialogue, storyboard planning, locations, cast, and notes into one project so the creative process can move from idea to production in a connected workflow.

ROLE

Developer, Designer, Implementer, and Tester.

JAVASCRIPT	Application Logic
REACT NATIVE	User interface
EXPO	Development & Mobile Testing
ASYNCSTORAGE	Local Data Storage

TAKEAWAY

The best creative technology does not overshadow the story, it gives it the platform to unfold.
